

ECODECK: THE APPEARANCE OF TEAK

The sustainable choice

At EcoDeck, we understand the desire to have nautical decking made of teak. Teak speaks a language of warmth and luxury. At the same time, however, we all have a responsibility to think of the planet and make sustainable choices. Now you can enjoy the high-end look and feel of teak decking without compromising on your environmental principles by fitting EcoDeck, developed in cooperation with Herculan Marine.

Our decking consists of prefabricated, viscous-elastic composite material. Its unique characteristics allow us to offer a completely custom designed proposal for each vessel. That includes everything from plank width and joint width to a personalised design in the decking, lettering, logos and so on. All that and more in 14 different colours.

More than just decks

The material used for EcoDeck is suitable for numerous applications in addition to outdoor decks. Examples include interior flooring, cladding, ceilings, cap rails and toe rails, steps and even gratings. Minimising the burden on Mother Nature is one of our core values so we don't just use materials that can be fully reused. EcoDeck is also strong, flexible, solvent-free, UV-proof, non-skid, flame retardant and easy to maintain.

Based on the digital measurements and AutoCAD-drawings provided, we supply EcoDeck in prefabricated panels, produced with the latest CNC techniques. The panels can be fully bonded to the substructure, whether that be aluminium, steel, GRP or mineral based.

Added value backing

Unlike other current alternatives, we use a unique backing for the panels. EcoDeck has a patent for this system which makes a clear quality difference compared to other nautical decking brands. The backing is produced with a high-quality formaldehyde-free glue, which is easy to use and will last for decades. The raw material for the backing has been modified for excellent dimensional stability and durability via a toxin-free environmentally friendly process.

Green and safe

Just like our precious earth, the experts at EcoDeck are constantly on the move. An enormous amount of their research focuses on regulations and

user requirements. EcoDeck has proven itself a safe product according to SOLAS and IMO regulations. During its lifetime EcoDeck will maintain its properties and, if needed, can be easily repaired. It is DNV GL certified product and Green tag verified.

Prior to this sustainable adventure, the team behind EcoDeck has graced superyachts and leisure yachts with teak decking for years. They understand the appearance and emotion of wood and have successfully combined that knowledge and craftsmanship with sustainability and innovation to create a new experience. EcoDeck nautical decking will meet your requirements in a professional, sustainable and innovative manner, offering you the heart-warming feel of teak while easing the burden on Mother Nature.
